LIST OF CONTENTS

NUMBER 1

M. J. Ulloa and **J. Ochoa** 1 Horizontal convective rolls in a tilted square duct of conductive and insulating walls

Sheam-Chyun Lin and **Ming-Chiou Shen** 19 Flight simulation of a waverider-based hypersonic vehicle

C. de Nicola, G. Pinto and **R. Tognaccini** 43 Stability of two-dimensional model problems for multiblock structured fluid-dynamics calculations

Huaxiong Huang and **Ming Li** 59 Finite-difference approximation for the velocity-vorticity formulation on staggered and non-staggered grids

Hui-Liu Zhang and **Xin Zhang** 83 Flow structure analysis around an oscillating circular cylinder at low KC number: a numerical study

NUMBER 2

O. Botella 107 On the solution of the Navier–'Stokes equations using Chebyshev projection schemes with third-order accuracy in time

S. Kumar and **T. Tamaru** 117 Computation of turbulent reacting flow in a jet assisted ram combustor

E. Guilmineau, J. Piquet and **P. Queutey** 135 Two-dimensional turbulent viscous flow simulation past airfoils at fixed incidence

E. Y. K. Ng and **S. Z. Liu** 163 A novel implicit difference algorithm of primitive variable flow equations with higher-order extra terms

Oh Joon Kwon and **L. N. Sankar** 183 Numerical simulation of the flow about a swept wing with leading-edge ice accretions

Wen-Zhong Shen and **Ta-Phuoc Loc** 193 Numerical method for unsteady 3D Navier–Stokes equations in velocity–vorticity form

NUMBER 3

J. Rincón and **R. Elder** 217 A high-resolution pressure-based method for compressible flows

Rizwan-uddin 233 A second-order space and time nodal method for the one-dimensional convection–diffusion equation

P. A. Forsyth and **H. Jiang** 249 Nonlinear iteration methods for high speed laminar compressible Navier–Stokes equations

Xugui Ren, Ken-Han Wang and **Kang-Ren Jin** 269 Open boundary conditions for obliquely propagating nonlinear shallow-water waves in a wave channel

Fei Li and **M. R. Malik** 279 Spectral analysis of parabolized stability equations

G. Carré 299 An implicit multigrid method by agglomeration applied to turbulent flows

I *Announcements*

NUMBER 4

T. P. Chiang, T. W. H. Sheu and **S. F. Tsai** 321 Topological flow structures in backward-facing step channels

P. Hamala, P. Khosla, P. Morgan and **S. Rubin** 339 Streamline based grid adaption for Euler and Navier–Stokes: direct and inverse design applications

A. Povitsky and **M. Wolfshtein** 359 Parallelization efficiency of CFD problems on a MIMD computer

B. Granier, A. Lerat and **Zi-Niu Wu** 373 An implicit centered scheme for steady and unsteady incompressible one and two-phase flows

A. Clarke and **R. I. Issa** 395 A numerical model of slug flow in vertical tubes

Technical Note

D. Xu, M. A. Leschziner, B. C. Khoo and **C. Shu** 417 Numerical prediction of separation and reattachment of turbulent flow in axisymmetric diffuser

Software Survey Section

M. N. Zakharenkov 425 SAVVINO-01 "Calculation of the viscous incompressible flow around a body (two-dimensional case)

NUMBER 5

Jen-Ching Tsao, A. P. Rothmayer and **A. I. Ruban** 427 Stability of air flow past thin liquid films on airfoils

E. Barragy and **G. F. Carey** 453 Stream function–vorticity driven cavity solution using p finite elements

T. Jongen and **Y. P. Marx** 469 Design of an unconditionally stable, positive scheme for the K–ϵ and two-layer turbulence models

M. Kadja, J. S. Anagnostopoulos and **G. C. Bergeles** 489 Implementation of newly developed algorithms in the simulation of atmospheric turbulent transports

P. D. Orkwis, R. Sengupta and **S. M. Davis** 505 Flow field saddles and their relation to vortex asymmetry

W. H. Calhoon Jr and **R. L. Roach** 525 A naturally upwinded conservative procedure for the incompressible Navier–Stokes equations on non-staggered grids

I *Announcements*

NUMBER 6

S. A. M. Said, M. A. Habib and **M. A. R. Khan** 547 Turbulent natural convection flow in partitioned enclosure

T. Ogawa and **K. Fujii** 565 Numerical investigation of three-dimensional compressible flows induced by a train moving into a tunnel

D. D'Ambrosio and **R. Marsilio** 587 A numerical method for solving the three-dimensional parabolized Navier–Stokes equations

E. Turkel, R. Radespiel and **N. Kroll** 613 Assessment of preconditioning methods for multi-dimensional aerodynamics

J. R. Edwards 635 A low-diffusion flux-splitting scheme for Navier–Stokes calculations

I *Announcement*

NUMBER 7

R. S. Alassar and **H. M. Badr** 661 Oscillating viscous flow over a sphere

G. H. Vatistas and **W. Ghaly** 683 On the pure polar flow within two concentric spheres

O. Filippova and **D. Hänel** 697 Lattice-Boltzmann simulation of gas–particle flow in filters

B. Wasistho, B. J. Geurts and **J. G. M. Kuerten** 713 Simulation techniques for spatially evolving instabilities in compressible flow over a flat plate

R. C. Mehta and **T. Jayachandran** 741 Navier–Stokes solution for a heat shield with and without a forward facing spike

NUMBER 8

M.-H. Chou	755	Synchronization of vortex shedding from a cylinder under rotary oscillation
A. Ålund, P. Lötstedt and **M. Sillén**	775	Parallel single grid and multigrid solution of industrial compressible flow problems
A. Vardy and **Z. Pan**	793	Quasi-steady friction in transient polytropic flow
J. L. Xia, B. L. Smith, A. C. Benim, J. Schmidli and **G. Yadigaroglu**	811	Effect of inlet and outlet boundary conditions on swirling flows
T. N. Phillips and **R. G. Owens**	825	A mass conserving multi-domain spectral collocation method for the Stokes problem
	I	Volume Contents and Author Index, Volume 26 (1997)
